FSI Technologies Inc. announces it has expanded its line of machine vision services and components with its new “LE” line of LED light sources. This new series of LED lighting for machine vision solutions includes LED back lights, bar lights, ring lights, square ring lights, as well as accessories, cables and power supplies.

“Proper lighting systems are a crucial part of any machine vision solution” notes Fred Turek, FSI’s COO. “When used correctly, lighting can be a key component in highlighting the difference between a ‘good’ product and a ‘faulty’ one.”

The LED lights are available in various colors and dimensions. These LED lights can be ordered separately, or as a part of a complete machine vision solution. For the complete listing of the new FSI “LE” series illumination for machine vision, visit their lighting page at: www.machinevisionlighting.com

FSI Technologies is located in Lombard, Illinois and has been a trusted manufacturer of factory automation products since 1959. For more information about FSI, visit their website at www.fsinet.com.
