

NeuroCheck® Serial Communication Notes

Additional Serial Communication Information Source

In addition to the main help menu and manuals, substantial information is contained in the help system / file name RS232C.HLP which is typically located in the NeuroCheck directory. Example: C:\Program Files\Ncheck51\RS232C.HLP.

Serial Port Set Up for Automatic Selection of Check Routines - Additional Notes

Obtain a NeuroCheck-powered unit from FSI Machine vision furnished with a tested serial port.

See above referenced information sources for detailed info on enabling of the serial port. This includes settings in NeuroCheck under System->Device Manager. Note: There is a slightly hard to find paragraph on this contained in the RS232c.hlp file, see: Communication Protocol -> Recognized Data Packets

If the serial port will be used for automatic selection between Check Routines, see additional automatic check routine selection notes available in FSI Machine Vision Publication # SDOC-058-009
